La poesia è la vanità
di una materia
capace di riflettere
ciò che ci circonda
e di moltiplicare
i nostri punti di vista
sul reale.

Poetry is the vanity
of a material capable
of reflecting what
is around us increasing
our points of view
on reality.

Fusione

Il know-how che ci rende unici.

La fusione è un trattamento termico durante il quale la lastra di vetro si deforma per gravità. Nel corso di questa operazione interviene l'artigiano addetto alla fusione che aiuta, per così dire, il vetro ad assumere la forma desiderata, imprimendo al prodotto finito quella unicità che lo contraddistingue da un oggetto interamente industriale.

In Fiam sono attualmente presenti più forni in cui si raggiungono temperature tra i 650° ed i 900° C. Tali impianti sono progettati e realizzati all'interno dell'azienda e rappresentano la massima espressione del nostro know-how.

Melting

The expertise that makes us unique.

Melting is a heat treatment during which the sheet of glass is deformed by gravity. In the course of this operation, the worker in charge of melting assists the glass, so to speak, to assume the desired shape, giving the finished product its unique features that set it apart from a mass-produced object.

Fiam currently has more furnaces reaching internal temperatures of between 650° and 900° C. This equipment is designed and built within the company and represents the pinnacle of our know-how.

DV-Glass

Un brevetto innovativo per superare i limiti del vetro industriale. DV-Glass® nasce dalla necessità di reinventare un materiale dalle molteplici sfaccettature, ottimizzando tutte le fasi del processo produttivo, dall'approvvigionamento al consumo, abbracciando a pieno i concetti di economia circolare e sostenibilità ambientale. L'idea è quella di sezionare la lastra di vetro, derivante anche dal recupero di varie rimanenze di lastre, in tante piccole strisce di vetro. Con l'unione di queste strisce anche di spessori ed altezze diverse, poste una vicina all'altra da mani sapienti, si possono generare svariate combinazioni cromatiche, ragionate o totalmente casuali. Poi le elevatissime temperature dei forni fondono le strisce così disposte in una nuova lastra, lasciando percettibile alla vista e al tatto la presenza degli elementi di partenza. Nasce così il DV-Glass®, un vetro che si distingue da tutti gli altri vetri in lastra presenti sul mercato grazie al forte spessore, alle grandi dimensioni ed alle infinite combinazioni cromatiche che si possono ottenere. L'elevata variabilità del processo di fusione unita alla forte artigianalità della fase di pre-assemblaggio, fanno sì che ogni nuova lastra sia di fatto diversa da quella precedente e mai identica a quella successiva.

DV-Glass

An innovative patent to surpass the limitations of industrial glass. DV-Glass® was conceived with a view to reinventing a multi-faceted material, optimizing all the production process phases, from procurement to consumption, while fully embracing the concepts of circular economy and environmental sustainability. The idea is to section the sheet of glass, by recovering various off-cuts of glass sheets, into lots of small glass strips. By combining these strips, including ones of different thicknesses and heights, and skilfully placing them side by side, a variety of colour combinations can be created, according to a specific or random pattern. Then, the ultra-high temperatures of the ovens melt the strips until they combine into a new sheet that showcases the visual and tactile properties of the original elements. This is how DV-Glass® was invented, a type of glass that is set apart from all the others on the market due to its high thickness, large dimensions and the possibility of infinite colour combinations. The extreme variability of the melting process combined with the high degree of craftsmanship in the pre-assembly phase means that each new sheet is, in fact, different from the previous one and never the same as the next.

Curvatura

Il connubio perfetto tra tecnologia e sapienza artigianale.

La curvatura della lastra in vetro è il processo che ha permesso a Fiam di distinguersi nel mondo.

Attraverso l'impiego di stampi mobili complessi e di un altoforno all'avanguardia, riusciamo a trasformare una lastra di vetro in una forma tridimensionale, di fatto mantenendo le condizioni d'equilibrio del vetro tra lo stato solido e quello liquido, in situazioni mai ripetibili.

Il maestro curvatore ne è il protagonista assoluto in quanto capace di associare la perizia tecnica alla capacità manuale. Fondamentale è il controllo termico della lastra su specifici punti della stessa al fine di ammorbidire diversamente tali punti in funzione della forma da ottenere. Grazie all'ausilio di vari attrezzi, il maestro riesce così ad agire sullo stampo per plasmare la lastra di vetro e donarle la forma voluta.

Tale manualità esige un'elevata sensibilità che è determinante per la qualità del prodotto finito. Ed è proprio dall'incontro di alta tecnologia e di sapienza artigianale che nascono prodotti unici, non seriali.

Bending process

The perfect combination of technology and artisan expertise.

The bending of the glass sheet is the process that put Fiam's name on the global map.

Through the use of complex moveable moulds and an avant-garde blast furnace, we succeed in transforming a sheet of glass into a three-dimensional shape, while maintaining the balance of the glass between the solid and liquid state, in unrepeatable situations.

The master bender is the key figure because he is able to combine technical expertise with manual dexterity. Controlling the temperature of the sheet of glass at various points is fundamental in order to soften each one differently depending on the final shape to be achieved. Through the use of various tools, the master bender succeeds in moulding the sheet of glass to give it the desired shape.

This dexterity requires a high level of sensibility which is crucial for the quality of the finished product. It is from this specific encounter between cutting-edge technology and artisan expertise that unique, non mass-produced items are created.

Argentatura

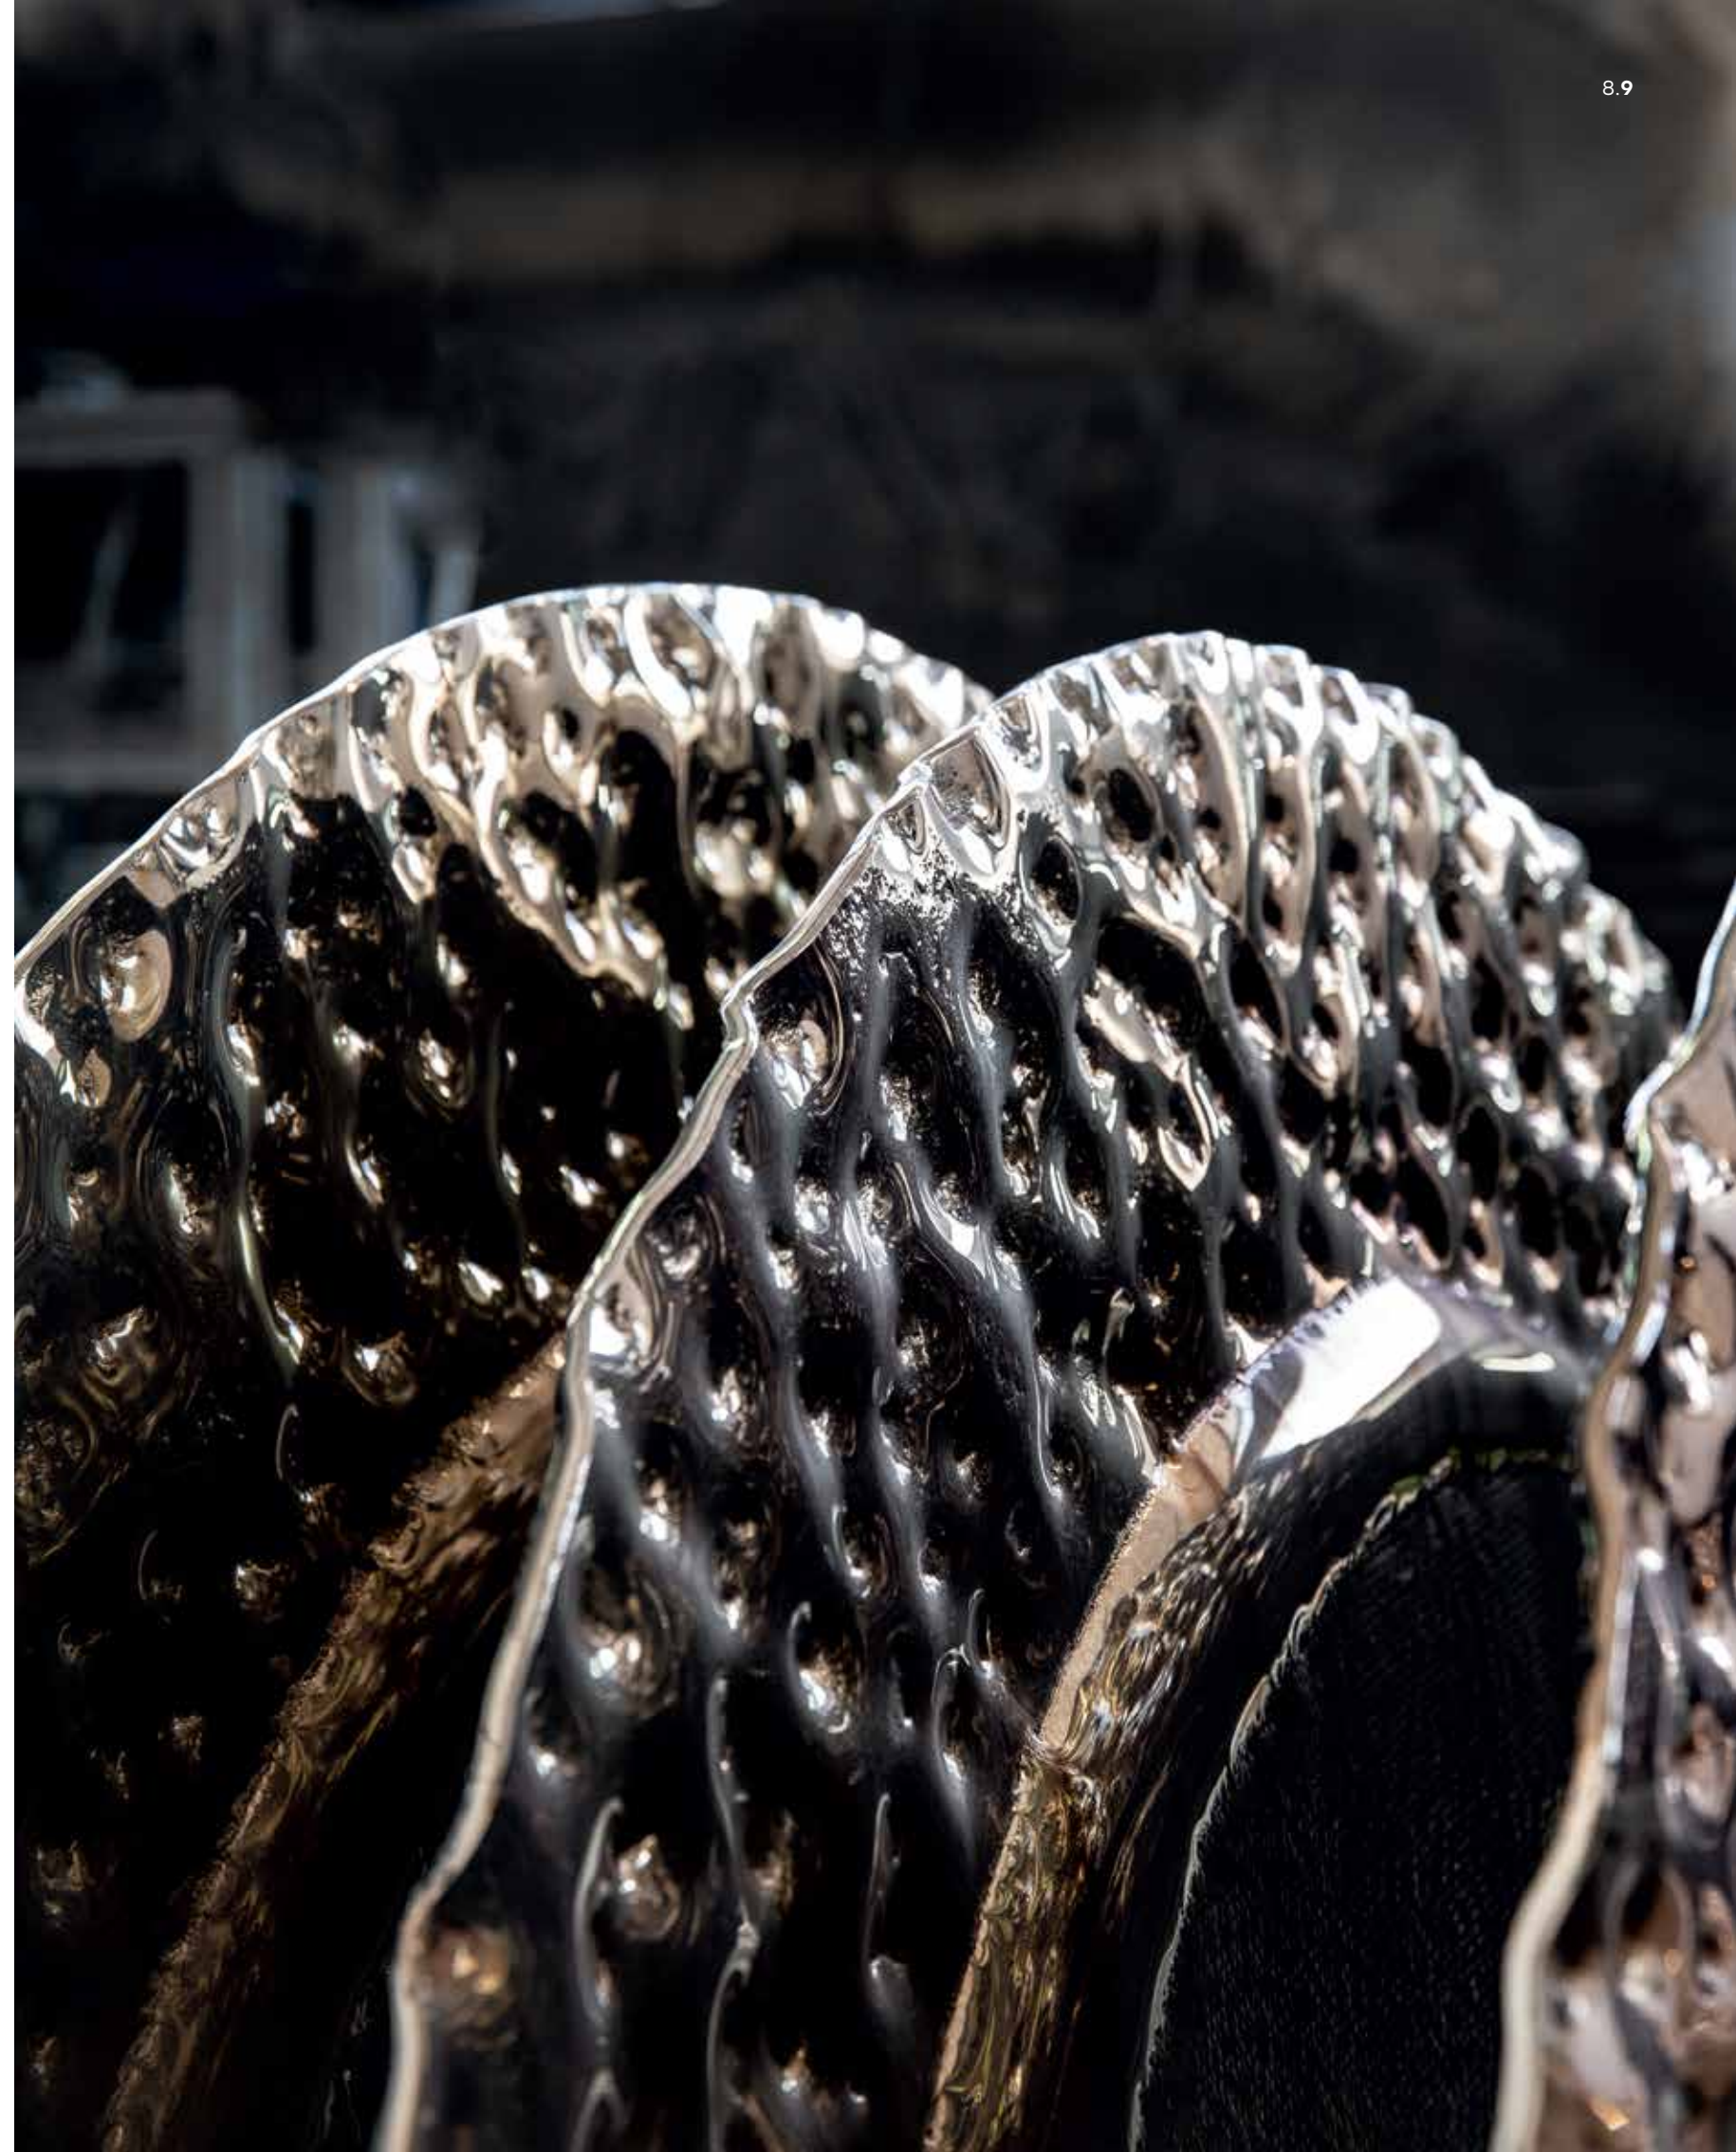

La magia della riflessione.

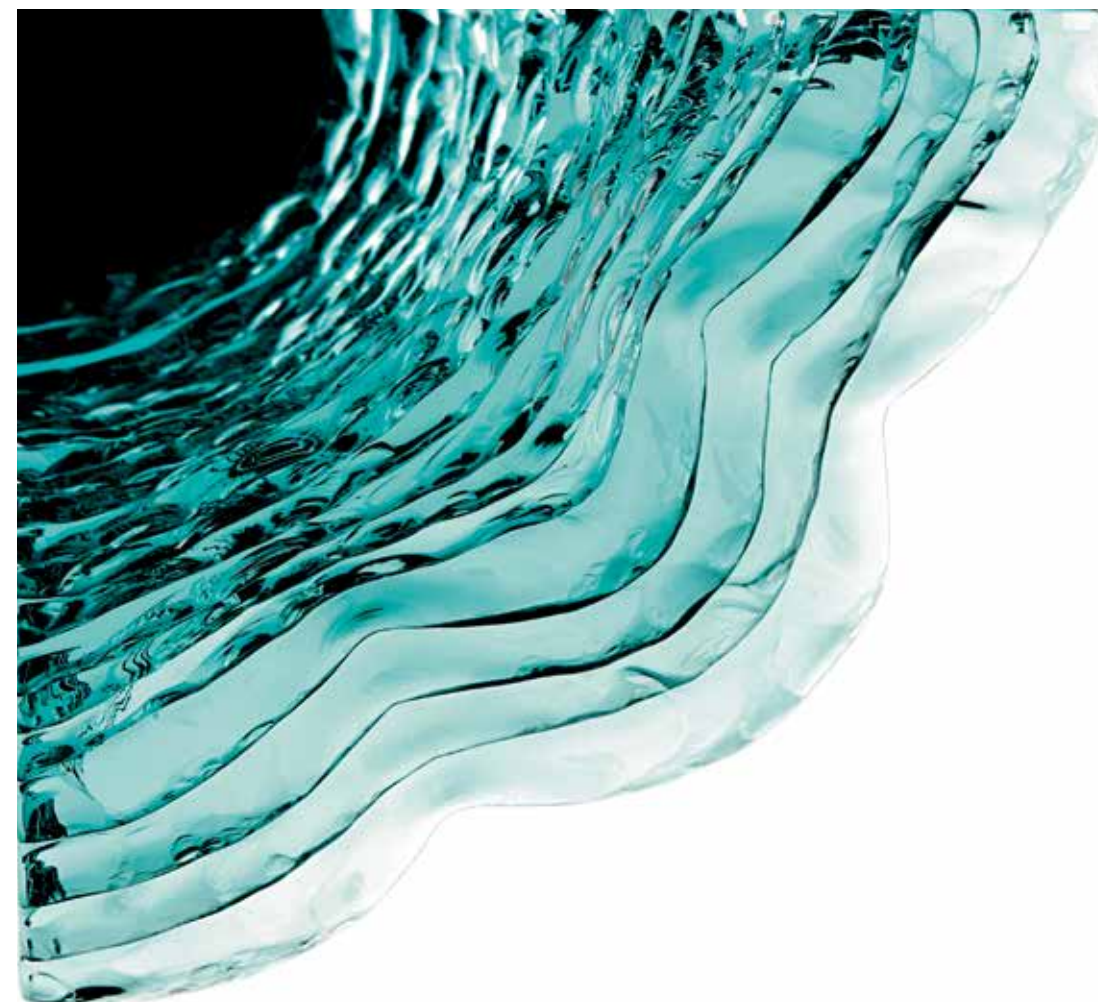

Il processo di argentatura consiste nel deposito di argento metallico in forma liquida sulla superficie della lastra in vetro per la realizzazione dello specchio: un vetro in grado di riflettere i raggi luminosi che ne colpiscono la superficie. Tale operazione, basata principalmente su reazioni chimiche, sottende anche un rigoroso controllo di tutti i parametri che ne determinano la qualità finale in quanto fortemente influenzabili dalle condizioni atmosferiche. Seppur caratterizzato da una elevata componente tecnologica, per il buon esito di questo processo è fondamentale l'esperienza e la sensibilità dell'artigiano addetto all'argentatura.

Silvering

The magic of reflection.

The silvering process consists of depositing metallic silver in liquid form on the surface of the sheet of glass to create a mirror. A mirror that can reflect the rays of light that strike its surface. This operation is based on chemical reactions, but also involves careful control of all the parameters that determine the quality of the end product given that they are influenced by atmospheric conditions. Although featuring a high technological content, the experience and sensibility of the artisan in charge of silvering is also essential in ensuring a successful outcome in this process.

Scolpitura

Quando l'arte incontra la produzione industriale.

La scolpitura è uno dei momenti più affascinanti del processo produttivo, in cui la sapienza artigianale trova la sua espressione più spettacolare.

Su un tavolo appositamente attrezzato, il maestro scultore compie gesti che lo avvicinano all'artista per la sensibilità che il processo richiede e per il risultato finale. Scegliere frammento dopo frammento il pezzo di vetro più adatto, disegnare la forma che dovrà assumere e infine scolpirlo mediante un particolare "utensile" con un movimento quasi ritmico: scheggia dopo scheggia si manifesta l'abilità del maestro scultore e si può assistere all'incontro fra la creatività e la manualità.

I singoli frammenti, una volta scolpiti, vengono lavorati a nastro e assemblati l'uno all'altro fino ad ottenere un componente (per esempio la gamba di un tavolo) che è più vicino al pezzo d'arte, unico ed irripetibile.

Sculpting

When art encounters mass production.

Sculpting is one of the most fascinating steps of the production process in which artisan expertise is expressed in its most spectacular form.

On a specially equipped bench, the master sculptor moves almost like an artist given the sensitivity required by the process and for the end result. Selecting piece after piece of the most suitable glass, designing the shape that each piece must assume, and sculpting it using a special "tool" with an almost rhythmical movement: piece by piece, the master sculptor's skill is showcased in the point where creativity and dexterity come together.

The individual pieces, once sculpted, are finished on a sanding belt and assembled to obtain a component (for example, a table leg) that resembles a unique and unrepeatable piece of art.

Responsabili per natura

Il vetro simbolo dell'ecosostenibilità.

È costituito prevalentemente di sabbia e calce. È asettico, atossico e non rilascia alcuna sostanza nociva. Il vetro è eterno e può essere riciclato all'infinito senza scarto. FIAM Italia ha da sempre contribuito alla valorizzazione di questo materiale, non solo da un punto di vista tecnico ed estetico ma elevandolo da complementare a protagonista del design; il tutto attraverso lo sviluppo di processi di lavorazione interni che si svolgono nel pieno rispetto dell'ambiente.

Il nostro approccio sostenibile non si limita all'esaltazione di un materiale le cui qualità intrinseche abbracciano a pieno i principi dell'economia circolare. La ricerca costante condotta sulla materia ci porta ogni giorno a scoprire nuovi orizzonti, ampliandone le possibilità di impiego.

Responsible by nature

Glass, a symbol of eco-sustainability.

It consists mainly of sand and lime. It is aseptic, non-toxic and does not release any harmful substances. Glass is eternal and can be recycled without waste ad infinitum. FIAM Italia has always contributed to the enhancement of this material, not only from a technical and aesthetic point of view, but by elevating it from an accessory to a design centrepiece through the development of in-house manufacturing processes that fully respect the environment.

Our sustainable approach, however, is not limited to enhancing a material whose intrinsic qualities wholly embrace the principles of circular economy. Continuous research into the material leads us to the daily discovery of new horizons, thus expanding the ways in which it can be used.

divani e poltrone

sofas and armchairs

“Pensai di progettare provocatoriamente una poltrona inesistente, per sedersi nel vuoto ma non pensavo seriamente di fare una poltrona in vetro. Tuttavia per Ghost la mia diffidenza fu superata dal desiderio/sfida di vedere se era possibile eseguirla, e se Fiam sarebbe stata così brava da riuscire a produrla...” - Cini Boeri

“I had thought of provocatively designing a non-existent armchair, to sit in emptiness, but I never had seriously thought of making an armchair in glass. Yet for Ghost my diffidence was overcome by the desire/challenge to see if we could actually realize it, and if Fiam would be so good as to be able to produce it...” - Cini Boeri

Un divano snello e sobrio si aggiunge alla collezione FIAM Italia ispirandosi agli elementi sinuosi e sottili in vetro curvato che l'azienda produce. L'idea è di creare un divano slanciato, leggero, che dia comunque l'impressione di essere confortevole. Il bracciolo basso e spiovente termina sul retro con un piccolo flip (come una quater pipe nello skateboarding, o come un'onda), così il supporto posteriore per i cuscini di schienale diventa più alto, comodo ed accogliente. I piedi dal design sottile conferiscono leggerezza a tutto il divano.

A slim and sober sofa joins FIAM Italia's collection, taking inspiration from the sinuous and subtle curved glass elements produced by the company. The idea is that of creating a slender, light sofa that could still give the impression of comfort. The low, pitched armrest culminates in the back side with a tiny flip (similar to a quarter pipe in the skateboarding, or as a wave) so that the rear support for the cushions of the backrest gets higher, cosy and comfortable.

COMPOSIZIONI SUGGERITE _ SUGGESTED COMPOSITIONS

“L’idea per questo divano mi è venuta a seguito di una visita alle cave di marmo di Carrara: le grandi pareti di marmo creavano degli splendidi disegni tridimensionali di incastri geometrici. Queste suggestioni hanno guidato lo studio formale del divano, come il dettaglio dell’incastro tra la seduta, il bracciolo e lo schienale. Geometrie rigorose ma ricche di preziosi particolari.” - Matteo Nunziati

“The idea for this sofa came to me following a visit to the Carrara marble quarries: the large marble walls created beautiful three-dimensional patterns of geometric joints. These suggestions guided the formal study of the sofa, such as the detail of the joint between the seat, the armrest and the backrest. Strict geometries but rich in precious details.” - Matteo Nunziati

tavoli bassi e di servizio

coffee tables and side tables

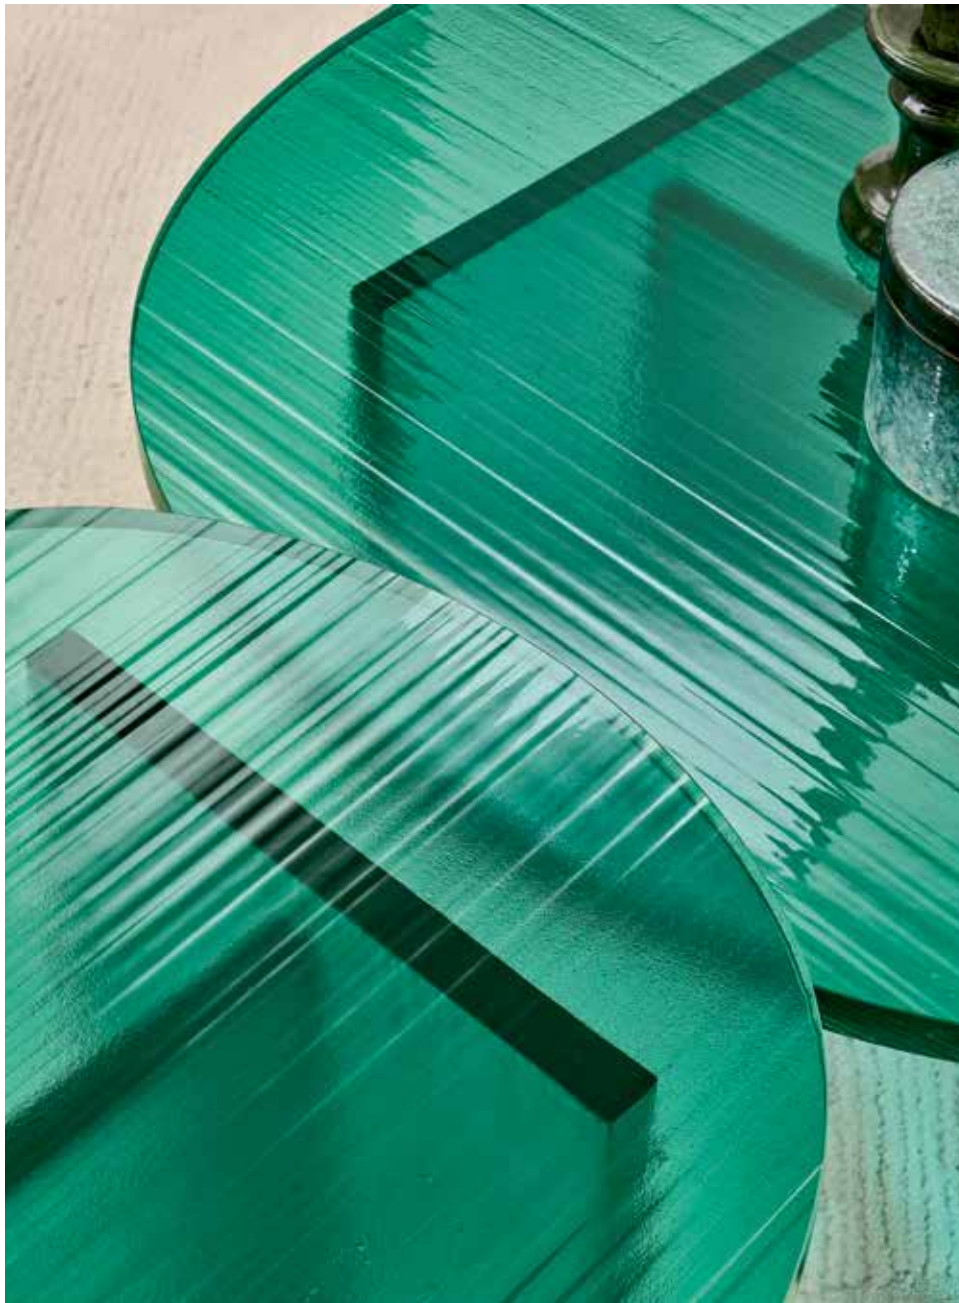

Gliss è un una collezione di tavolini che esplora ritmo e matericità. Ispirato alla bellezza dei tessuti plissettati, il vetro raggiunge una nuova dimensione di profondità ed eleganza. Realizzato utilizzando il DV-Glass, materiale innovativo creato grazie ad una tecnica brevettata da Fiam Italia che fonde più elementi in vetro ad alta temperatura, trasforma un materiale rigido in una superficie ricca di movimento e consistenza. Le striature verticali che attraversano la sua struttura giocano con luce ed ombra, cambiando trasparenza a seconda dell'angolazione dell'osservatore. Gliss è una dichiarazione di artigianalità e sperimentazione. Incarna la capacità di Fiam Italia di spingere la materia vetro oltre i suoi limiti, trasformando un materiale statico in qualcosa di dinamico.

Gliss is a coffee tables duo that explores rhythm and materiality. Inspired by the beauty of pleated fabrics, glass reaches a new dimension of depth and elegance. The Gliss collection features the DV-Glass, an innovative material developed through a patented technique by FIAM Italia which consists in the high-temperature fusion of multiple glass sheets, transforming a rigid material into a new surface that is rich in movement and texture. The vertical striations running through its structure interact with light and shadow, shifting in transparency depending on the viewer's perspective.

La collezione Cristaline è sinonimo di grazia e fine bellezza, ottenuta attraverso l'esclusiva tecnologia per la fusione del vetro propria di FIAM, con l'obiettivo di creare un pattern intricato e superficiale, sintesi tra geometria e natura, attraverso la riproduzione di un complesso motivo floreale. Traendo ispirazione dal tradizionale bouquet in vaso, questo motivo sostituisce i fiori naturali con incisioni eterne di fiori trasparenti e cristallizzati sul piano, accogliendo per sempre la bellezza organica e la natura all'interno della casa.

Cristaline collection exemplifies subtle beauty and grace by experimenting with the unique technology of melting glass, mastered by FIAM, to create an intricate and surface pattern which expemplifies geometry and and nature through a complex floral pattern. By drawing inspiration from the traditional bouquet in a vase in a dining setting, this pattern substitiues natural flowers for eternal engravings of transparent, crystalized flowers on your table, forever welcoming organic beauty and nature into the home.

Type è una collezione di tavolini, disponibili in tre formati, costruiti come una scrittura e disegnati come un linguaggio. Sono una serie di pittogrammi, tre monotipi che possono essere composti in un'infinità di logotipi. Questi tre tavolini possono sovrapporsi per formare nuovi glifi, nuove espressioni formali. Ad ogni utilizzo, emerge un nuovo linguaggio formale.

Type is a collection of coffee tables, in three sizes, constructed like a writing and drawn like a language. It is a series of pictograms, three monotypes which can be composed into an infinity of logotypes. These three tables can overlap to form new glyphs, new formal ex-pressions. With each use, a new formal language emerges.

Forme organiche dai bordi stondati incastonate in una cornice metallica. I tavolini Halo, disegnati per Fiam, sono pensati per interagire tra loro, in un gioco di sovrapposizioni e trasparenze, esaltando le sagome fluide e tondeggianti della superficie vetrofusa, che ricorda nei toni una pietra preziosa. Da materiale freddo e inflessibile, il vetro diventa così sostanza vibrante e malleabile, in opposizione alle quattro gambe e all'anello di sostegno in ottone brunito, che accolgono e trattengono il piano d'appoggio, diventando l'elemento contenitivo e caratterizzante della superficie vitrea.

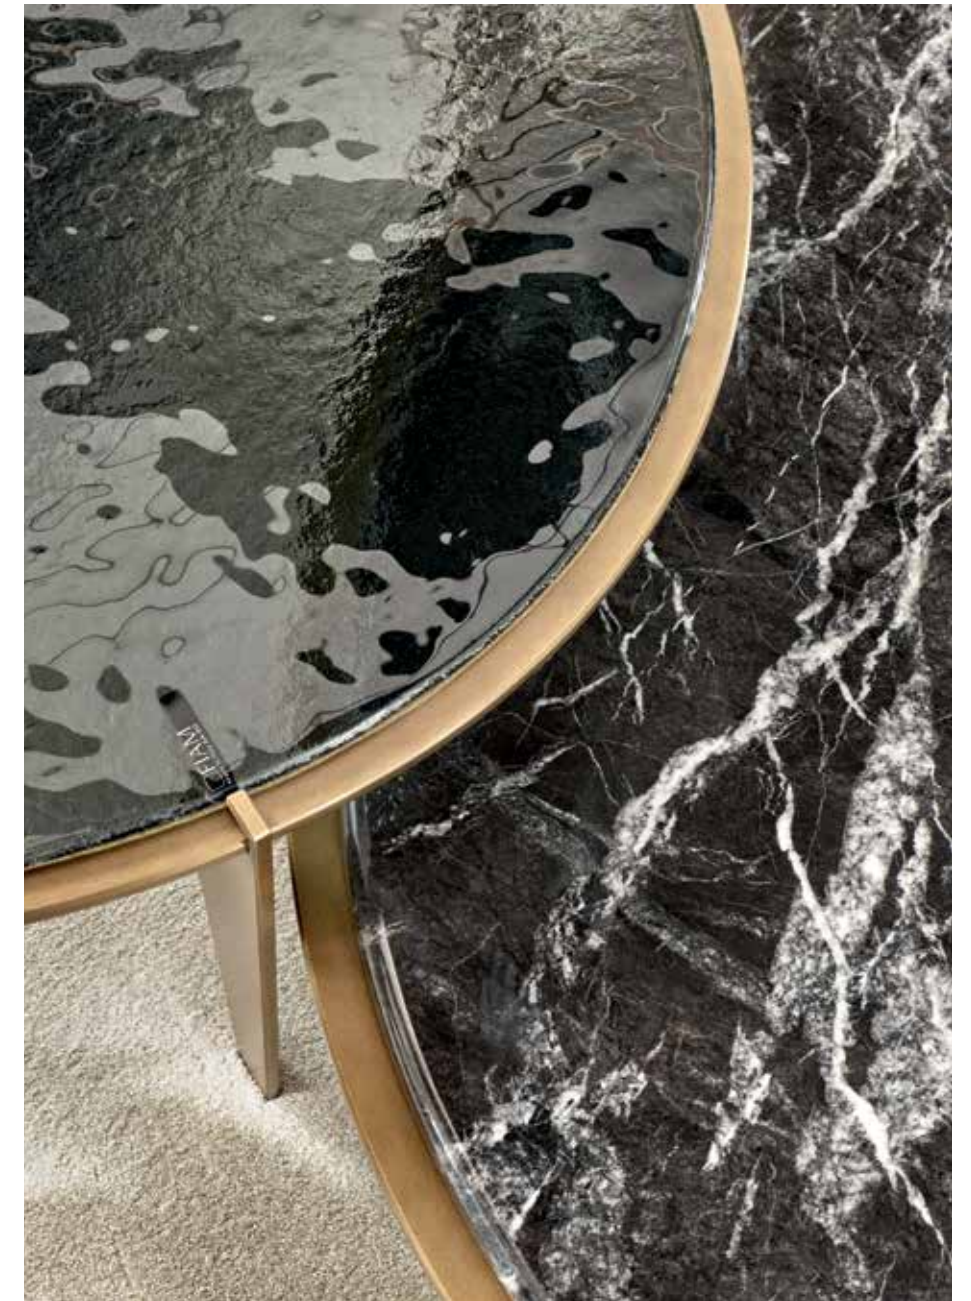

Organic shapes with rounded edges set in a metal frame. The Halo coffee tables, designed for Fiam, are meant to interact with each other in a play of overlapping and transparency, enhancing the fluid, rounded silhouettes of the fused glass surface, reminiscent in tone of a precious stone. From being a cold and inflexible material, glass thus becomes a vibrant and malleable substance, in opposition to the four legs and supporting ring made of burnished brass, which accommodate and hold the table top, becoming the containing and characterizing element of the glass surface.

Base finitura Ottone Brunito, piano in vetro bronzo; piano in marmo Mystic Brown.
Burnished Brass finish base, bronze glass top; Mystic Brown marble top.

Questa collezione di tavolini è l'espressione del desiderio di esaltare le abilità tecniche e sperimentali di Fiam al servizio di una ricerca estetica del designer. Cannage prende forma dall'idea di modellare, di lavorare il vetro per conferirgli un effetto di intrecci. In omaggio al savoir-faire artigianale e tradizionale, che richiede precisione manuale, destrezza e pazienza, Emmanuel Gallina gioca con le conoscenze tecniche e sperimentali per dare questa impronta, questa trama al vetro. Da questa ricerca storica emerge una collezione di tavolini unici e decisamente contemporanei dalle molteplici interpretazioni (intreccio, mashrabiyya, tessitura, effetto a maglia). Così l'associazione del vetro a trame provenienti dalla memoria collettiva permette di proiettare ed inserire questo materiale in un'atmosfera più calda.

This collection of coffee and sides tables is the result of the desire to exalt Fiam's technical and experimental skills at the service of designer's aesthetic research. Cannage takes shape from the idea of modeling, and crafting glass in order to give to it a braided effect. In tribute to the artisanal and traditional savoir-faire, which requires manual precision, skill and patience, Emmanuel Gallina plays with technical and experimental knowledges to give this print and this texture to the glass. From this historical research arises a collection of unique and decisively contemporary tables with multiple interpretations (braiding, mashrabiyya, weaving, knitting). Thus association of glass with textures belonging to the collective memory allows this material to be projected and inserted in a warmer atmosphere.

L'intento era quello di creare un design ispirato alla natura, alle forme organiche ed al design architettonico moderno, supportato dall'avanguardia di Fiam nella lavorazione del vetro. Amo la grande sinergia tra il design moderno futuristico e le lavorazioni artigianali tradizionali, che si influenzano a vicenda permettendo la realizzazione di nuove idee. È stupefacente come, nell'era della stampa 3D, abbiamo creato uno stile artistico in vetro fuso in 3D, utilizzando una lavorazione tradizionale artigianale di Fiam, dove ogni tavolo ha un'impronta del maestro vetraio e della leadership artistica e innovativa dell'azienda nella lavorazione del vetro.

My goal was to create design where my inspiration with nature, organic forms and modern architectural design is supported with Fiam state of art glass manufacturing technology. I love the great synergy between modern futuristic design and traditional artisan manufacturing, they are both influencing each other allowing new ideas to materialize. I am astonished that in the age of 3d printing, we created an artistic 3d fused vibe in glass using traditional Fiam artisan manufacturing technology where each table has a foot print of glass master and foot print of Fiam leadership in artistic and innovative glass manufacturing.

En è una famiglia di tavoli bassi realizzati in vetro fuso a gran fuoco. In giapponese En significa "forma rotonda" e allo stesso tempo evoca il destino di un incontro, diventando simbolo di inclusione. Il piano in vetro è ispirato al piatto della camelia, un oggetto utile per il rituale del tè giapponese. La forma, leggermente concava, restituisce un senso di sicurezza e protezione degli oggetti contenuti. Sebbene il piano superiore sia in vetro, ha un colore intenso come la lacca giapponese ed un elegante design della superficie vetrosa, grazie alla tecnica della fusione ad alta temperatura ed all'impiego di speciali tinte metallizzate.

En is a series of glass coffee tables realized by resorting to a high-temperature fusion process. In Japanese, En just stands for "round shape", as to evoke the fate of an encounter that subtends and symbolizes inclusion. The glass top gets inspiration from the camellia dish, an essential element in the Japanese tea ceremony. Its shape, slightly concave, conveys a sense of safety and protection for the objects inside. Despite the upper top is made of glass, its intense colour recalling the Japanese lacquer and the elegant design of the surface are key, distinguishing features obtained through a high-temperature fusion process, as well as the recourse to special metallic lacquering.

Waves è una collezione di tavolini realizzati con un nuovo vetro, mai così materico e mai così emozionale, dove la percezione della superficie vetrosa varia a seconda della prospettiva con la quale si guarda all'oggetto. Una lavorazione studiata e brevettata da Fiam, un vetro lamellare che viene portato ad alte temperature generando un corpo ed una matericità mai vista prima su un vetro in lastra, unita alla profondità del materiale che perde completamente la sua freddezza.

Big Wave, created with a new kind of glass, is a collection of tables which has never been so perceptible and so emotional. The vision of the various glassy surface changes according to the perspective from which the object is observed. The production process was created and patented by Fiam and it uses a lamellar glass which is heated to high temperatures, allowing to obtain a matericity and structure never seen before in a sheet of glass, which material loses completely its coldness.

Il vetro fuso diviene protagonista assoluto della collezione Lakes, una serie di coffee tables e side tables dove la materia viene trattata quasi fosse allo stato liquido, in un'alternarsi di riflessi e trasparenze esaltate dallo spessore del vetro e dai bordi stondati. Il vetro come materiale vivo e fluido, quasi fosse l'acqua di un lago che si presenta in tutta la sua naturale eleganza, grazie alla struttura minimale in metallo pensata per rimanere al servizio del vetro, lasciandolo come interprete principale della collezione.

Fused glass is the main protagonist of Lakes, a collection of coffee and side tables where the material is worked as if it was in its liquid state: a play of reflections and transparencies highlighted by the thickness of glass and the round-shaped edges. Glass appears in its vivid and fluid nature, quite resembling lake water that shows up in all its natural elegance thanks to the essential metal structure thought to be at the its service, to let it be the absolute protagonist of the collection.

Il risultato di una ricerca congiunta nel campo delle tecnologie per la fusione del vetro, il tavolino Magma sembra quasi ammorbidire il materiale. Sostenuto da una struttura di base in legno massello, il piano è costituito da una lastra di vetro fuso grazie all'ausilio di uno specifico stampo. Durante la cottura, la struttura naturale dello stampo segna il vetro, producendo un effetto grafico innovativo. Anche se la sua produzione rimane industriale, il tavolino Magma fa virtù delle sue imperfezioni: la tecnica sviluppata da Patrick Jouin e FIAM consente la produzione di pezzi unici con l'impiego di una tecnologia industriale.

The result of joint research into technologies for melting glass, the Magma coffee table almost seems to soften the material. Held on a solid wood base structure, the top is made of a sheet of fused glass thanks to a specific mould. During melting process, the natural texture of the mould marks the glass, producing an innovative graphic effect. Although its production remains industrial, the Magma coffee table makes virtue of its imperfections: the technique developed by Patrick Jouin and FIAM enables the production of one-off pieces using industrial technology.

“Grazie all'abilità dei suoi maestri scultori, in Fiam si riesce a modellare questo tavolino in modo da rendere ogni pezzo unico, trasmettendo l'anima di questo materiale; basta osservare una gamba dall'alto, è come immergersi nella profondità dell'oceano e sentirsi emozionati così come solo in pochi casi si riesce ad esserlo.” - Danny Lane

“Thanks to the skill of its master sculptors, Fiam manages to mould this coffee table so that every piece is unique, and conveys the soul of this material; simply looking at one of the legs from the top is like diving into the depth of the ocean, with a rare sensation of awe and wonder.” - Danny Lane

Shell è materia che prende vita sotto il gesto dell'artigiano. Ogni segno, ogni increspatura cattura la luce e la restituisce in riflessi sempre nuovi; ogni imperfezione diventa caratteristica distintiva e potenzia l'effetto emotivo della trasparenza. Una scultura domestica, dove luce e materia si fondono in una presenza audace ed intensa.

Shell is material brought to life by the artisan's touch. Every mark, every ripple captures the light and returns it in ever-changing reflections; every imperfection becomes a distinctive feature, enhancing the emotional power of transparency. A domestic sculpture, where light and matter merge into a bold and intense presence.

Tavolo basso contenitore formato da quattro elementi di vetro curvato che si oppongono respingendosi ed equilibrandosi. Una forma ridotta all'essenza eppure caratteristica che da ogni prospettiva appare sempre diversa, un gioco di pieni e vuoti dove la luce riflessa nel vetro piano e curvato crea dettagli magici. Il virtuosismo straordinario nella lavorazione del vetro di Fiam è in questo pezzo espresso dalla pura semplicità dalla scoperta progressiva di dettagli sofisticati ed unici. L'uso di differenti tipi di vetro può rendere Quadra molto diverso, con il vetro extra chiaro il tavolo sembra sparire nello spazio circostante, mantenendo solamente i bagliori di luce sugli angoli, con il vetro nero diviene elegante e ricercato, con lo specchio magico e sofisticato.

It is a low container table consisting of four elements of curved glass that oppose each other, at the same time repelling yet balancing. A form reduced to the essence and yet characteristic that from every perspective always appears different, a play of solids and voids, where the light reflected in the flat and curved glass creates magical details. The extraordinary virtuosity in the manufacture of glass of Fiam is expressed in this piece by the pure simplicity of the progressive discovery of sophisticated and unique details. The use of different types of glass seeks to make Quadra extremely different, with extra-clear glass the table seems to disappear into the surrounding space, with mere glimpses of light on the corners, with black painted glass that becomes elegant and refined, with mirror becomes magic and sophisticated.

La base di questo tavolino non è solo vetro: è una trama di emozioni, forgiata con la delicatezza di un gesto artigianale antico. Come una maglia di luce sospesa nel tempo, il vetro filato si intreccia con grazia e forza, creando un effetto visivo sorprendente, quasi surreale. Un oggetto di design che trasforma lo spazio e lo riempie di incanto.

The base of this coffe table is more than just glass: it's a weave of emotions, forged with the delicacy of an ancient artisanal gesture. Like a mesh of light suspended in time, the spun glass intertwines with grace and strength, creating a visually striking, almost surreal effect. A design piece that transforms the space and fills it with enchantment.

La purezza del segno e l'essenzialità della materia sono le linee dettate dai grandi maestri. Mies van der Rohe dichiarava "less is more": la collezione Rialto è una delle espressioni massime di questo pensiero.

The purity of the sign and the essentiality of matter are the lines dictated by the great masters. Mies van der Rohe stated that "less is more": the Rialto collection is one of the highest expressions of this concept.

Con York abbiamo voluto esplorare i limiti del vetro curvato. Abbiamo lavorato su forme curve autoportanti, dove la sagoma del tavolino conferisce rigidità alla struttura stessa: questo ci ha portato alla forma definitiva del tavolino York. Sulla base abbiamo combinato il vetro con un elemento in marmo che aggiunge un tocco di eleganza e garantisce stabilità all'intera struttura.

In York, we aimed to explore the limits of curved glass. We worked on self-supporting folding forms, where the inherent shape provided rigidity to the structure. This led us to the ultimate form of York: a sleek glass side table. Additionally, at the base, we combined it with a marble piece that stabilizes the entire ensemble.

Base in marmo Mystic Brown, struttura in vetro bronzo.

Abbiamo progettato questo elemento valorizzando il disegno organico dei piani, che ricorda proprio la forma di pietre naturali. L'accostamento di forme, materiali e finiture contribuisce a caratterizzare il prodotto. A livello formale abbiamo lavorato sull'idea del top monolite e gamba a stelo: i due elementi sono allineati in alto tanto che la superficie di appoggio è offerta anche dalla gamba. Piano e gamba si vanno dunque a completare in un'unica forma, diventando parte di un unico insieme. Un oggetto trasversale che si inserisce facilmente in ogni contesto, dando all'ambiente un accento di stile e contemporaneità.

We designed this element by enhancing the organic design of the tops, which precisely looks like the shape of natural stone. The juxtaposition of shapes, materials and finishes helps to characterize the product. At the formal level, we worked on the idea of the monolithic top and stem leg: two elements that are aligned in the upper part such that the support surface is also offered by the leg itself. Top and leg thus go together in a single form, becoming part of a single whole. A transversal object that can easily fit into any context, giving the environment a stylish and contemporary accent.

Sintesi perfetta di eleganza e innovazione, questo tavolino in vetro curvato rappresenta un esempio raffinato di design contemporaneo. Realizzato attraverso una sofisticata tecnica di curvatura, il vetro assume forme morbide e fluide, dando vita a un volume unico, senza giunzioni. La trasparenza del materiale esalta la leggerezza del pezzo, mentre le linee essenziali lo rendono adatto a diversi contesti d'arredo, dal più minimalista al più sofisticato.

A perfect synthesis of elegance and innovation, this curved glass side table is a refined example of contemporary design. Crafted using a sophisticated glass-bending technique, the material takes on soft, fluid shapes, creating a seamless form with no visible joints. The transparency of the glass enhances the lightness of the piece, while its clean lines make it suitable for a variety of interior styles, from minimalist to more sophisticated settings.

Una struttura in vetro solida e armoniosa che vive di ombre e riflessi. Ogni elemento in vetro è stato accuratamente tagliato ed incollato, dando vita ad un volume trasparente e luminoso, che gioca con la luce dell'ambiente circostante. L'aspetto è moderno e rigoroso, ma allo stesso tempo semplice e pulito. L'impiego di vetro colorato per il cubo interno genera un sorprendente effetto di sospensione grazie ad un gioco di volumi intersecati.

A solid and harmonious glass structure that comes to life through shadows and reflections. Each glass element has been carefully cut and elded, giving shape to a transparent and luminous volume that interacts with the surrounding light. The appearance is modern and refined, yet simple and clean. The use of colored glass for the inner cube creates a surprising sense of suspension, thanks to an interplay of intersecting volumes.

FIAM è certificata UNI EN ISO 9001; la conformità a questa norma di riferimento permette a FIAM di raggiungere altissimi standard qualitativi. Una delle testimonianze dirette è la rintracciabilità dei suoi manufatti: ogni prodotto FIAM reca una decalcomania indelebile, cotta ad altissima temperatura, nella quale viene riportato oltre al marchio aziendale, un codice che permette di ricostruire il suo intero ciclo produttivo.

FIAM est une entreprise certifiée UNI EN ISO 9001; la conformité à cette norme de référence permet à FIAM d'atteindre des niveaux de qualité très élevés. La traçabilité des produits en est une preuve: chaque produit FIAM porte une décalcomanie indélébile, cuite à très haute température, qui mentionne la marque de l'entreprise et un code permettant de reconstruire tout son cycle de production.

Fiam is certified UNI EN ISO 9001; the conformity to this reference norm allows Fiam to reach the highest quality standards. One of the direct evidences is the possibility to track of the products: a high temperature and therefore indelible decal is applied to every article, in addition to the company logo, this decal also bears a number of codes that allow the production cycle details of the article to be traced.

FIAM ist nach UNI EN ISO 9001 zertifiziert und garantiert damit für höchste Qualitätsstandards. Dazu gehört auch die Nachverfolgbarkeit des Entstehungsweges der Erzeugnisse: Jedes FIAM-Produkt wird mit einem bei hohen Temperaturen eingebrannten Abziehbild versehen, auf dem neben dem Markenzeichen des Herstellers eine Identifikationsnummer steht, anhand der sich der gesamte Produktionszyklus des Artikels nachverfolgen lässt.
